# RT/duroid® 5280LZ

## High Frequency Laminates

RT/duroid® 5280LZ filled PTFE composites, reinforced with woven fiberglass, are engineered for precise stripline and microstrip circuit applications that demand dimensional stability throughout PWB processing.

The unique filler results in a low density, lightweight material for high performance weight sensitive applications. The very low dielectric constant of RT/duroid® 5280LZ laminates is uniform from panel to panel and is constant over a wide frequency range. Its low dissipation factor extends the usefulness of RT/duroid® 5280LZ laminates to Ku-band and above.

RT/duroid® 5280LZ laminates are easily cut, sheared and machined to shape. They are resistant to all solvents and reagents, hot or cold, normally used in etching printed circuits or in plating edges and holes. When ordering RT/duroid® 5280LZ laminates, it is important to specify dielectric thickness, tolerance, electrodeposited copper foil, and weight of copper foil required.

### /// Features and Benefits:

Lowest dielectric constant available

- Critical for registration of small circuit features

Low X, Y, & Z axis CTE

- Glass-reinforced construction delivers industry-leading Z-axis CTE from -50C to 288C

Lightweight/low density

- Low circuit losses

Uniform electrical properties over a wide frequency range

### /// Typical Applications:

- Airborne antenna systems
- Satellite communications
- Lightweight feed networks
- Military radar systems
- Missile guidance systems
- Point-to-point digital radio antennas
